

Conservation Rooflights

Mk 4 Conservation rooflights are low profile Aluminium and Glass units, which emulate traditional pitched rooflights. However, utilizing modern, thermally efficient Aluminium framework and sophisticated Glazing units, giving vintage appearance coupled with high comfort.

These can be provided to sit onto a small builders upstand or for setting into the roof with a lead surround for a very traditional appearance.

All of the above are manufactured 'in-house' by skilled fabricators and strict quality control procedures, ensuring a perfect solution to any rooflight requirement.

Site installation can be carried out throughout the U.K. by our teams of experienced installers.
